ADITYA MEHRA — MICROSOFT

Data Science & Applied AI Systems Intern (Redmond / Remote) | Dossier APX-AI-004 | Comp: $52/hr | Bengaluru • +91-7003456624 • ashishiash007@gmail.com

QUANTITATIVE THESIS: Azure AI Agent Service Integration, Enterprise RAG Governance & Workflow DAG Reliability
Deploying self-healing multi-agent DAG architectures with state-machine determinism across enterprise workflows.

Strategic Engineering & Operations Qualifications

- **Autonomous AI Systems Architecture:** Engineered deterministic multi-agent execution DAGs, automated verification gates, and evaluation fixtures.
- **High-Throughput Data Infrastructure:** Built sub-millisecond SQLite FTS5 search engines coordinating 9,816 cross-repository entities across 7 domains.
- **International Business & Quantitative Rigor:** BBA International Business (Class of 2026, CGPA 8.78/10.0) combining macro financial literacy with distributed backend engineering.
- **Production Reliability & Verified PRs:** Authored verified upstream pull requests resolving compiler defects in enterprise TypeScript and Python codebases.

Candidate Pitch to Microsoft

I am applying for the Data Science & Applied AI Systems Intern (Redmond / Remote) role with a commitment to mathematical rigor and software craftsmanship. Having developed autonomous agent runtimes, sub-millisecond search indexes, and verified testing pipelines, I specialize in eliminating systemic operational latency and engineering reliable systems under extreme concurrency. My background in international business operations allows me to evaluate technical trade-offs through the lens of capital efficiency. I look forward to discussing how I can deliver immediate value to Microsoft.
