# ADITYA MEHRA — NVIDIA

AI-Aided Systems & High-Performance Compute Intern (2027) | Dossier APX-AI-005 | Comp: $62/hr | Bengaluru • +91-7003456624 • ashishiash007@gmail.com

**QUANTITATIVE THESIS: GPU Cluster Workflow Orchestration, Distributed State Checkpointing & Synthetic Simulation Engines**
Maximizing hardware compute leverage by eliminating data ingestion bottlenecks in distributed deep learning pipelines.

## Strategic Engineering & Operations Qualifications

- **Autonomous AI Systems Architecture:** Engineered deterministic multi-agent execution DAGs, automated verification gates, and evaluation fixtures.
- **High-Throughput Data Infrastructure:** Built sub-millisecond SQLite FTS5 search engines coordinating 9,816 cross-repository entities across 7 domains.
- **International Business & Quantitative Rigor:** BBA International Business (Class of 2026, CGPA 8.78/10.0) combining macro financial literacy with distributed backend engineering.
- **Production Reliability & Verified PRs:** Authored verified upstream pull requests resolving compiler defects in enterprise TypeScript and Python codebases.

## Candidate Pitch to NVIDIA

I am applying for the AI-Aided Systems & High-Performance Compute Intern (2027) role with a commitment to mathematical rigor and software craftsmanship. Having developed autonomous agent runtimes, sub-millisecond search indexes, and verified testing pipelines, I specialize in eliminating systemic operational latency and engineering reliable systems under extreme concurrency. My background in international business operations allows me to evaluate technical trade-offs through the lens of capital efficiency. I look forward to discussing how I can deliver immediate value to NVIDIA.
