ADITYA MEHRA — SNOWFLAKE

AI Research & Systems Engineer (Agents & RL) | Dossier APX-NG-006 | Bengaluru, India • +91-7003456624 • ashishiash007@gmail.com

TARGET VALUE THESIS: Multi-Tenant Data Cloud Governance, Agentic Vector Indexing & In-Database Model Invocation DAGs
Unifying autonomous agent execution runtimes directly with distributed analytical warehouses for sub-second decisioning.

Strategic Qualifications & Engineering Impact

- **Autonomous Systems Architecture:** Engineered deterministic multi-agent orchestration DAGs, autonomous verification loops, and automated error recovery.
- **High-Throughput Data Ingestion:** Constructed sub-millisecond SQLite FTS5 search engines aggregating 7,618 cross-repository records with real-time indexing.
- **International Business & Systems:** BBA International Business (Class of 2026, CGPA 8.78/10.0) combining macro operations rigor with distributed backend engineering.
- **Enterprise Open-Source Reliability:** Forked and patched production compiler flaws, verified multi-language suites (TypeScript, Python, React, n8n), and opened verified upstream PRs.

Candidate Pitch to Snowflake

I am applying for the AI Research & Systems Engineer (Agents & RL) position with a commitment to engineering discipline and high-leverage execution. Having developed autonomous agent fabrics, high-speed full-text search indexes, and verified software pipelines, I specialize in eliminating operational friction and building robust, maintainable systems. My background in international business operations allows me to evaluate technical trade-offs through the lens of enterprise unit economics. I look forward to discussing how I can deliver immediate impact to Snowflake.
