ADITYA MEHRA — ESRI

Backend Java Engineer I (Data Pipelines) | Dossier APX-NG27-009 | Bengaluru, India • +91-7003456624 • ashishiash007@gmail.com

TARGET VALUE THESIS: Geospatial Indexing Primitives, Distributed Vector Tiles & High-Volume Spatial Analytics
Designing distributed data streaming pipelines and spatial indexing engines to support mission-critical geographic information systems and spatial analytics.

Strategic Qualifications & Engineering Impact

- **Autonomous Systems Architecture:** Engineered deterministic multi-agent orchestration DAGs, autonomous verification loops, and automated error recovery.
- **High-Throughput Data Ingestion:** Constructed sub-millisecond SQLite FTS5 search engines aggregating 10,400+ cross-repository records with real-time indexing.
- **International Business & Systems:** BBA International Business (Class of 2026, CGPA 8.78/10.0) combining macro operations rigor with distributed backend engineering.
- **Enterprise Open-Source Reliability:** Forked and patched production compiler flaws, verified multi-language suites (TypeScript, Python, React, n8n), and opened verified upstream PRs.

Candidate Pitch to Esri

I am applying for the Backend Java Engineer I (Data Pipelines) position with a commitment to engineering discipline and high-leverage execution. Having developed autonomous agent fabrics, high-speed full-text search indexes, and verified software pipelines, I specialize in eliminating operational friction and building robust, maintainable systems. My background in international business operations allows me to evaluate technical trade-offs through the lens of enterprise unit economics. I look forward to discussing how I can deliver immediate impact to Esri.
